FaiBeatuy

Steps:

1) Create and compile reference materials from Bootstrap documents

2) Create a Github repository

3) Clone from the repository using "git clone"…

4) Add all html files like home, blog, contact, who we are and create custom template for reuse

5) Add pictures, colors and fonts

6) Include delete and Update options for articles

7) between pages (gitignored)

8)Add the corresponding and appropriate js files for the blog and contact.

9) Update blog.js to add functionality to Add Blog Post

10)Update contact.js to validate the input

11) Design pages using bootstrap and custom css
